

Windows 11 Endpoint Protection Service

Windows 10 Support Has Ended. Is Your Business Protected?

Don't let unprotected legacy devices become the weakest link in your IT strategy, especially now that Windows 10 is no longer supported by Microsoft. **Visual Edge IT's Windows 11 Endpoint Health Optimization Service** provides a seamless, secure migration to a modern OS. Transition now to ensure your business is immediately protected, compliant, and operating at peak performance.

- Close the #1 security gap exploited by cybercriminals.
- Protect your company's most valuable asset—your data.
- Avoid costly penalties from data breach non-compliance.
- Empower your team with modern, high-performance tools.
- Future-proof your IT and stop relying on vulnerable legacy technology.

Visual Edge IT delivers a comprehensive service designed to manage your entire migration from start to finish. We don't just install an update; we ensure every endpoint is secure, healthy, and optimized for the modern work environment.

Secure & Compliant Endpoints

Eliminate vulnerabilities from outdated systems and meet modern data protection standards to safeguard your business and your reputation.

Optimized Performance

Ensure devices run faster and more reliably with a healthy, modernized operating system, boosting employee productivity and reducing frustrating IT issues.

Seamless User Transition

Minimize downtime and business interruption with a professionally managed migration that keeps your team focused and productive.

Empowered IT Administration

Gain ongoing support and a stable, easy-to-manage platform, freeing up valuable resources to focus on strategic initiatives instead of fighting fires.

Our Proven 7-Step Migration Process

We eliminate the complexity and risk of OS migration with a structured approach that guarantees security, stability, and minimal disruption to your business. Each step is designed to deliver a seamless transition and ensure your endpoints are perfectly optimized for the future.

1. Pre-Upgrade Assessment & Planning

We start with a comprehensive analysis of your entire IT environment, identifying hardware, software, and security risks before the migration begins. You receive a detailed readiness report and a clear, phased rollout plan designed to prevent surprises and ensure a smooth process.

2. License Management & Upgrade Execution

Our team handles all licensing requirements and deploys the Windows 11 upgrade using automated tools for precision and consistency. We schedule the execution during off-hours to minimize user downtime and keep your business running without interruption.

3. Failure & Rollback Support

In the rare event of an upgrade failure, our automated rollback protocol instantly restores the device to its previous state, preventing data loss. We then perform a root cause analysis to resolve the issue before re-attempting the upgrade, ensuring a successful outcome.

4. Post-Upgrade Health & Security Monitoring

Once migrated, we don't just walk away. We continuously monitor each endpoint to validate its health, confirm security compliance, and optimize performance, ensuring your new Windows 11 environment is stable and secure from day one.

5. Education & User Enablement

To ensure a positive user experience, we provide communication toolkits, FAQs, and training resources. We empower your team to take full advantage of Windows 11's new features, maximizing adoption and productivity across your organization.

6. Engineering & Consultative Support

Throughout the project, you have direct access to our senior engineers and consultants. We provide expert guidance to resolve complex challenges, optimize your IT environment, and help you build a strategic technology roadmap.

7. Project Tracking & Visibility

Stay informed every step of the way with a dedicated project scorecard and regular status reports. We provide complete transparency into our progress, issue resolution, and key milestones, so you always know where your project stands.

Your Success Is Our Benchmark

We measure the success of every project against these critical criteria:

- **100% Upgrade Success:** All targeted endpoints are migrated to Windows 11.
- **Zero Critical Failures:** No unresolved rollbacks or persistent device issues.
- **Verified Endpoint Health:** Every device meets security and performance standards.
- **High User Satisfaction:** A smooth, positive experience for your entire team.
- **On-Time Delivery:** The project is completed within the agreed timeline and scope.

Modern Work
